

10th Annual MAT-SU SALMON SCIENCE & CONSERVATION SYMPOSIUM

November 8 & 9, 2017 9am-4pm
Palmer Community Center (Depot)
610 S. Valley Way Palmer, AK

Keynote Speaker: Tara Martin, PhD
*University of British Columbia
Department of Forest & Conservation
Sciences*

Dr. Tara Martin is a conservation scientist and pioneer in the translation of ecological data into conservation management decisions. Dr. Martin's research is being adopted around the

world to help organizations decide what actions to take, when and where to get the best conservation outcomes, while taking into account the many other competing needs of society. With over 100 scientific publications, Tara's work bridges the gap between science and on-the-ground action. Tara will speak about what it takes to avoid irreversible loss of wild salmon populations and draw on her team's current work in Fraser River Estuary, British Columbia, historically one of the largest salmon bearing rivers in the world.

Find registration and presentation information at:

www.matsusalmon.org

Presentation and poster abstracts due October 5.

Online registration closes October 27.

\$25/day to attend. Students free.

Includes lunch and refreshments.

If expense is prohibitive,
