

Identification of Cold Water Inputs and Their Use By Juvenile Coho Salmon in the Big Lake Watershed

Joshua Ashline

US Fish and Wildlife Service

Anchorage Field Office

Thermal Imagery by:

Watershed Sciences Corvallis, OR

Background

- Seasonal habitat limitations.
 - Rearing habitat versus overwintering habitat.
- Factors causing distributions and movements?

Lucille Creek, Alaska

Objectives

- Identify significant cold water inputs using thermal infrared imagery.
- Compare juvenile coho abundances above and below cold water inputs.

Results

- 57 significant cooling areas were identified in the form of tributaries, springs, and seeps.
- Coho abundance appears higher near cold water inputs.
